

Transporta SPDB 40

Your price with VAT295 CZK

Special trailer for transporting long loads Transporta SPDB 40 in the form of a cutout. The set consists of two similar chassis - each has all axles movable and connected by a functional steering. The model also includes a pair of crossbeams as a load. However, you do not have to use them and it is possible to couple the pair "short". You can create a model with or without a cabin interior. The set is intended for previously released RipperWorks models, whether civil (Tatra 813TP, currently released re-edition Tatra 815TP (RW-79), or military (Tatra 815VT). The model is printed by offset on paper weighing 160g / m², on a total of 12 pages B4. The manual contains a total of 20 three-dimensional instruction drawings and 3 "springs" - details. The model also includes a sheet of transparent foil for "glazing" the model. Dimensions of the assembled model: 380mm (length in the connected state) / 750mm (length with load), 88mm
